Great Dunham Primary School

Eco-classroom

Completed March 2011

Great Dunham Primary School was a rural primary school severely lacking in teaching space. The school already had one existing mobile classroom but felt an eco-classroom would be a better investment in the future of the school compared to a traditional mobile classroom.

The classroom is the standard eco-classroom design; a single storey timber framed stand alone structure, constructed in just seven weeks with reduced running costs compared to a traditional build classroom. Environmental credentials include an Air Source Heat Pump, sun-tubes to make full use of natural daylight and newspaper filled, super-insulated walls and roof.
